# Asad Jaffery

425-786-7045 | asadjaffery30@gmail.com | linkedin.com/in/asad-jaffery | github.com/Asad-Jaffery

## Education

**University of Washington** Seattle, WA

*B.S. Informatics, Concentration in Data Science | GPA: 3.9/4.0* *Dec 2025*

**Relevant Coursework:** Data Structures and Algorithms, Databases and Data Modeling, Advanced Data Science Methods, Database Systems, Intro to AI, Client-Side Development, Server-Side Development, Search and Recommender Systems

## Experience

**Shopify** Bellevue, WA

*Data Engineer – Analytics Engineering* *Jan 2026 – Present*

- Cut ~**25% (2 days)** of BigQuery slot time per rebuild off a company-wide GMV metric by consolidating pipeline logic into a centralized data model, achieving **99.99%** reconciliation accuracy over **5.2 billion orders**
- Implemented dbt versioning across **400+ data models**, introducing backwards compatibility for downstream consumers
- Built **3 dbt pipelines** reconciling internal AI usage against vendor billing data, allowing us to **uncover a JSON parsing bug** that was undercounting company-wide AI spend by **$800K/year**
- Built a training pipeline for a BigQuery ML (ARIMA) anomaly-detection model, now alerting on unparseable UA strings before they corrupt order event attribution data

**Tesla** Palo Alto, CA

*Data Engineer Intern – Energy, Residential Service Engineering* *Jun 2025 – Sep 2025*

- Built production SQL pipelines to deploy **15 new autoticketing workflows**, increasing Powerwall 3 automated failure reporting efforts by **16%** and Powerwall 2 by **29%**, exceeding the Q3 2025 goal
- Uncovered and drove a critical investigation of a Powerwall 2 failure mode affecting **27%** of returned units
- Automated ticket closure for **6 Powerwall failure modes**, canceling field-service tickets when in-fleet units self-recovered, saving support contact-center teams **1,000+ hours** of manual investigation

**USAFacts** Bellevue, WA

*Data Analyst Intern – Product* *Jun 2024 – Sep 2024*

- Owned end-to-end design, build, and deployment of a custom barcode visualization template for organizational use with the Flourish SDK and D3.js
- Increased user engagement by **22%** across **51 interactive product pages** by rewriting content, building cleaner data visualizations with Flourish and Python, and QA testing for page bugs

## Projects

**Stock Informer** | *NVIDIA AI Agent Builder Hackathon* Jul 2025

- Built and deployed an AI agent on NVIDIA Brev that creates market investment plans for users based on industry interest
- Used LangChain to integrate a Llama 3.3 70B model for an LLM reasoning pipeline and SerpAPI for real-time market-data research

**Recognize** | *University of Washington Capstone Highlight* Jan 2025 – Jun 2025

- Led the end-to-end development of a manager dashboard for employee recognition and engagement, as part of a company-sponsored capstone project **highlighted by the University of Washington**
- Built a Rails backend that feeds data into OpenAI's o4-mini model, generating insights that power 3 new consumer dashboard components
- Simplified state management across 11 components by refactoring the frontend to leverage React.js's Context API

**Lynk** | *2025 WINFO Hackathon Winner* Jan 2025

- Won **1st Place** in the "Best Coding" category at the University of Washington iSchool's largest hackathon by demoing the project to industry professionals in a competition against **250+ students**
- Created a Flask and React.js-based web app to connect local businesses with University of Washington students

## Skills

**Languages:** Python, SQL, JavaScript, TypeScript, Java, Ruby, HTML, CSS
**Frameworks & Libraries:** React.js, Node.js, Rails, Flask, dbt, Spark, Kafka, LangChain
**Tools:** AWS, GCS BigQuery, Apache Airflow, GitHub Actions, Claude Code, Codex, Git
**Certifications:** AWS Cloud Practitioner, DubsTech Data Visualization Certification, 3x Annual UW Deans List
